

Homework #6: Feminism, Science & Technology (10pts total)

1. What idea does all feminist thinking about science have in common?
2. Explain the distinctions in feminist epistemology between *spontaneous feminist empiricism*, *philosophical feminist empiricism*, and *radical feminist epistemology*.
3. Give an example of a cultural assumption embedded in the language of biology.
4. Give an example of how technology can embody images of gender, and how this can create social constraints.
