

Homework #3 (10pts total)

1. Why does Aristotle think place cannot be either the form or the matter associated with an object?
2. According to Aristotle, what are the two ways in which a time interval or a line segment can be infinite?
3. What does it mean to say that the place of a thing is the “innermost motionless boundary” of what contains it?
4. According to Aristotle, why is the world (i.e., the universe) spherical and not egg-shaped?
